

Software Developer

Job description

AlsoEnergy is the leading provider of renewable energy monitoring and control systems in North America. The Software Developer position will be supporting the AlsoEnergy code base. We currently utilize both Microsoft and Ruby on Rails environments, with our primary focus on Microsoft technologies.

Responsibilities

- Design and develop applications, websites, tools and back-end software to support our energy monitoring products.
- Assist the Technical Support team to diagnose and resolve issues.
- Work with customers to develop solutions to real-world problems.
- Assist with server maintenance, upgrades and deployment.

Desired Skills and Experience

- This person needs to have experience with Microsoft development and web technologies, including C#, ASP.net, MVC, IIS, HTML, JavaScript, React and SQL Server.
- Strong understanding of version control systems (Subversion, Git), including branching and merging strategies.
- Has knowledge of commonly-used concepts, practices, and procedures for agile Software Development.
- Bachelor's degree and experience in the renewable energy field, data acquisition systems or related areas is a plus.
- Basic understanding of electrical power systems is a plus.
- Self-motivated; ability to work without supervision.

Based in Boulder, AlsoEnergy provides the most comprehensive energy monitoring and financial management software solutions for renewable energy developers, manufacturers and investors who are establishing today's clean-tech industry standards and best practices. From residential and government to commercial and utility grade applications, AlsoEnergy's technology platform increases business results with online access to critical cost and production data. With the industry's only complete client-customized web application, AlsoEnergy's unique architecture and price point reduce risk, improve energy supply chain transparency and bring strategic vision to energy portfolio administration and the global clean-tech marketplace.
